To whom it may concern

Over the past few years our company has installed several Heat Saver Systems. The first system we installed was requested from a customer in Vancouver who heard about your product on the internet. We installed the Heat Saver System for him and he later reported that the system worked very nicely for his indoor pool.

We have since installed about 10 units and our customer feedback has been very positive. Most people have been surprised by the amount of money and energy they have saved by converting to the Heat Saver System. We also find a significant reduction of condensation on our indoor pools.

Last year we installed a unit at a condominium complex in Richmond with an outdoor pool. They have an annual New Years swim. We had the system ready a few days in advance to be sure the pool was at temperature for the big event so I thought I would drop in the day before. There was very little steam coming off of the pool. I thought UH OH the heater must have gone out. Upon closer inspection I found the pool was at temperature and the heater was fine. I stood there with the property manager in amazement, being that we were experiencing typical cold winter weather yet we hardly saw any steam coming off of the pool surface.

Just thought I would let you folks know you have a great product.

Thank you

Ken Bentley – Service Department
